

Modipol 400

Modipol 400 is a modified cellulose and is used to improve the Fluid Loss control of water base muds without increasing the viscosity. The product is effective in drilling fluids based on saturated brines. It stabilizes the rheological parameters of mud and improve the ability of inhabitation of clays and loams.

Properties

Appearance:	powder/granules from whitish to cream color
pH (1% solution):	7,0-11,0
Moisture content:	max 8%
Active material content	min. 55%
Substitution	min. 0,8
Storage and validity	min. 2 years

Application

Generally, Modipol 400 is added to mud in the range of 1 – 4 kg/m³ fresh water

Packaging

25 kg bags or 500-100 kg big bags
