

Defoamer T-10

Defoamer is an antifoaming additive highly-effective and efficient antifoaming and defoaming agent in low- and high-brine muds and has excellent dispersibility.

Application

The product is ready to use. Typical concentration range is from 0.05 to 0.1 %. In high viscosity mud's concentration up to 0.2 % is recommended. A place of dosing and doses should be adapted to local conditions (by industrial trials).

Parameters

Appearance:	homogeneous, slightly transparent yellowish solution
Active ingredients, %	100
Density (200C) , g/cm ³	approx. 0,90
Solubility in water:	easy emulsified
pH:	approx. neutral
Ion character:	non-ionic

Packaging

25 and 200 l PE barrels, tanks or in 1m³ containers
