

BDC-015 cement retarder

BDC-015 is a mixture of sodium and calcium lignosulfonates used as cement retarder that retards the thickening time of the slurries at high temperatures ranging from 120 to 155°C. Product is compatible with all classes of API, POZMIX cement and anionic and non-ionic materials.

Properties

Physical form	brown powder
Dry matter	min. 93.0%
pH (3% solution)	5-6
Bulk density	650 kg/m ³
Shelf life	3 years minimum

Packaging

25 kg multiply paper bags. BDC-015 should be stored in its sealed original packaging in a cool and dry place.
